Course Description:

Attend this basic to intermediate program to update your wound prevention and management knowledge and skills. This seminar will discuss pressure injury risk factors, prevention strategies, and other hard-to-heal wound etiologies such as arterial and venous insufficiency, diabetic foot ulcers, and more. Content includes Best Practice and Regulatory Guidelines for the wound assessment and documentation and reporting mandates from CMS. This program is appropriate for new and seasoned treatment nurses, facility or corporate wound management leadership, MDS Coordinators, PT/OT, providers, and others involved in wound prevention and management in the Post-Acute LTC setting.

Course Objectives or List of Topics Covered:

- + Identify patient/resident risk factors beyond the Braden, that may lead to pressure injury development;
- + Describe pressure injury prevention strategies;
- + Recognize assessment, documentation, and reporting parameters that meet best clinical practices and CMS guidelines;
- + Classify common wound etiologies leading to chronic, hard-to-heal wounds;
- + Describe treatment interventions that meet best clinical practice and regulatory guidelines;
- + Describe wound infection prevention and control practices;
- + Participate in a hands-on skills labs.
